

**AKENTEN APPIAH-MENKA UNIVERSITY OF SKILLS
TRAINING AND ENTREPRENEURIAL DEVELOPMENT
DEPARTMENT OF INFORMATION TECHNOLOGY EDUCATION**

SEMESTER 1 GROUP PROJECT WORK, 2026

COURSE CODE	MAT 239
COURSE TITLE	PROBABILITY & STATISTICS
PROGRAMME	BSC. INFORMATION TECHNOLOGY EDUCATION
DURATION	EIGHT (8) WEEKS
LECTURERS	PROF. YARHANDS DISSOU ARTHUR, DR. KWADWO AMO-ASANTE, ALFRED GYASI BANNOR
INSTRUCTIONS	1. Students should form groups of 20 members each. 2. Each member should contribute EQUALLY to the course of the work. 3. The group MUST not allow few members to do the work for the entire group. 4. If you are caught, the student who failed to participate will be penalised without considering any excuses. 5. Members will be called upon to present their results to the entire class and this is where each member will prove participation. 6. EACH group should get an external HARD DISC of any storage space. 7. Separate excel file of the index numbers of the members of the group, instruments designed to collect the data, data collected, google forms links, screenshot of the google forms, results, report of the results, pictures or videos that shows proof that members participated, interpretation and discussion of results reports, all should be stored on the HARD DISC for SUBMISSION at the day of the group presentations. 8. Failure to follow the INSTRUCTIONS above attracts penalty.

Title of the Project

Effect of Digital Well-Being and Screen Time on Study Habits of Information Technology (IT) Students

Aim of the Project

To examine how screen time and digital well-being affect the study habits of Information Technology students.

Project Duration

This project is to be undertaken over two months (8 weeks)

What is expected of the Project

1. Design a questionnaire using Google Forms
2. Collect data from 100 IT students
3. Code and enter data into SPSS
4. Analyse data using statistical methods
5. Interpret and discuss results
6. Write a formal report of the project and results

Questions that should answered in the project using the collected data

1. How much time do IT students spend using computers?
2. What are the differences by gender in terms of the variables?
3. What is the relationship between screen time and study habits?
4. What is the relationship between digital well-being and study habits?
5. What is the relationship between screen time and digital well-being?

The questionnaires should comprise of the following:

1. Demographic information
2. Digital well-being measures
3. Study habits measures
4. The amount of time spent using computers (screen time)

The data analysis should focus on the following:

1. Descriptive statistics
 - Frequencies and percentages
 - Mean and standard deviation
2. Correlation analysis
3. Independent samples t-test

This should be the structure of the final report of the project

1. Title Page

2. Abstract
3. Introduction
4. Methodology
5. Results
6. Discussion
7. Conclusion
8. References

Submission Requirements

- Research report in Microsoft Word (.docx)
- SPSS data file (.sav)
- SPSS output file (.spv)
- Proof of participation (Pictures or videos)
- Google forms link
- Screenshot of google forms
- Data collection instrument
- Excel file of members index numbers
- Power point presentation slides
